

Litepanels™ Articulating Arm

NAHS

NAHSM

The new Litepanels Articulating Arm allows for the ultimate in positioning control and yet weighs half as much as previous models. The new, lighter Articulating Arm allows camera operators more freedom with less fatigue. Features such as a lower profile control knob and overall smaller cross section keeps the arm functional and out of the way. An integral hot-shoe adapter has been added for increased stability and rigidity. The Litepanels Articulating Arm is available in 4inch and 8inch versions with standard hot shoe adapter configuration. A Conversion Kit provides accessory 1/4-20 and 3/8 threaded hardware as an alternative to the hot-shoe configuration.

The Articulating Arms can be purchased individually or as a pair with the Conversion Kit accessory hardware.
